

Restore database from backup file:

Tables Description:

Give table explanation: columns definition, number of rows, PK, FK (if any).

Relations between tables:

Find relation between the tables?

1. Find and sort the number of movies per language (use l_id_lang).
2. Select all data for movies: Subtitle language, Shelf and Title.
Data should be sorted by language primary key
3. Find titles for movies with Macedonian subtitles
4. Find all data for every order: member name and surname, movie title and order date
5. Find all data for every order: member name and surname, movie title and order date
for movies with ENGLISH subtitle
6. Find number of orders per language
7. Find the subtitle languages of movies and that have been ordered after 13.05.2021
(2021-05-13)
8. Make a report for orderings per movie, for ALL movies. For those movies that have
no orderings, there should be 0 as number. The result list should be sorted
starting from the most often ordered movie.
9. Find all data for members that live in Skopje, i.e. have Skopje as part of the
"location" data.
10. Find the name of the most often ordered movie
